

VO425

Feature Overview

Software Generated Ocular Stimuli

Full field of view visual stimuli are software generated on your laptop and can be output direct to your projector.

Complete Balance Testing

Tests include Spontaneous Nystagmus, Gaze, Smooth Pursuit, Saccade, Optokinetic, Positionals, Dix-Hallpike, and Bithermal Caloric tests.

You can easily design your own test protocols and load these with a single mouse click. A hand held device allows remote control of tests.

Automatic or Manual Analysis

The system produces very accurate measurements, but you can override this to make manual measurements

Remote Controlled Tests

It is possible to step through the tests using a remote device. USB remote control devices allow for easy operation.

Sharing Results

The VO425 is designed to facilitate collaboration. All results are stored in the OtoAccess database with facilities for printing detailed colour reports. Results and recordings can also be exported.

Electronic Medical Resources / Networking (EMR)

Export to PDF or XML

Automatic and Manual Analysis

The system produces real time accurate measurements with the user integrated editing functions
