clinic

# Tailor your own vestibular package according to the needs of your clinic

## **Modularity for any balance clinic**

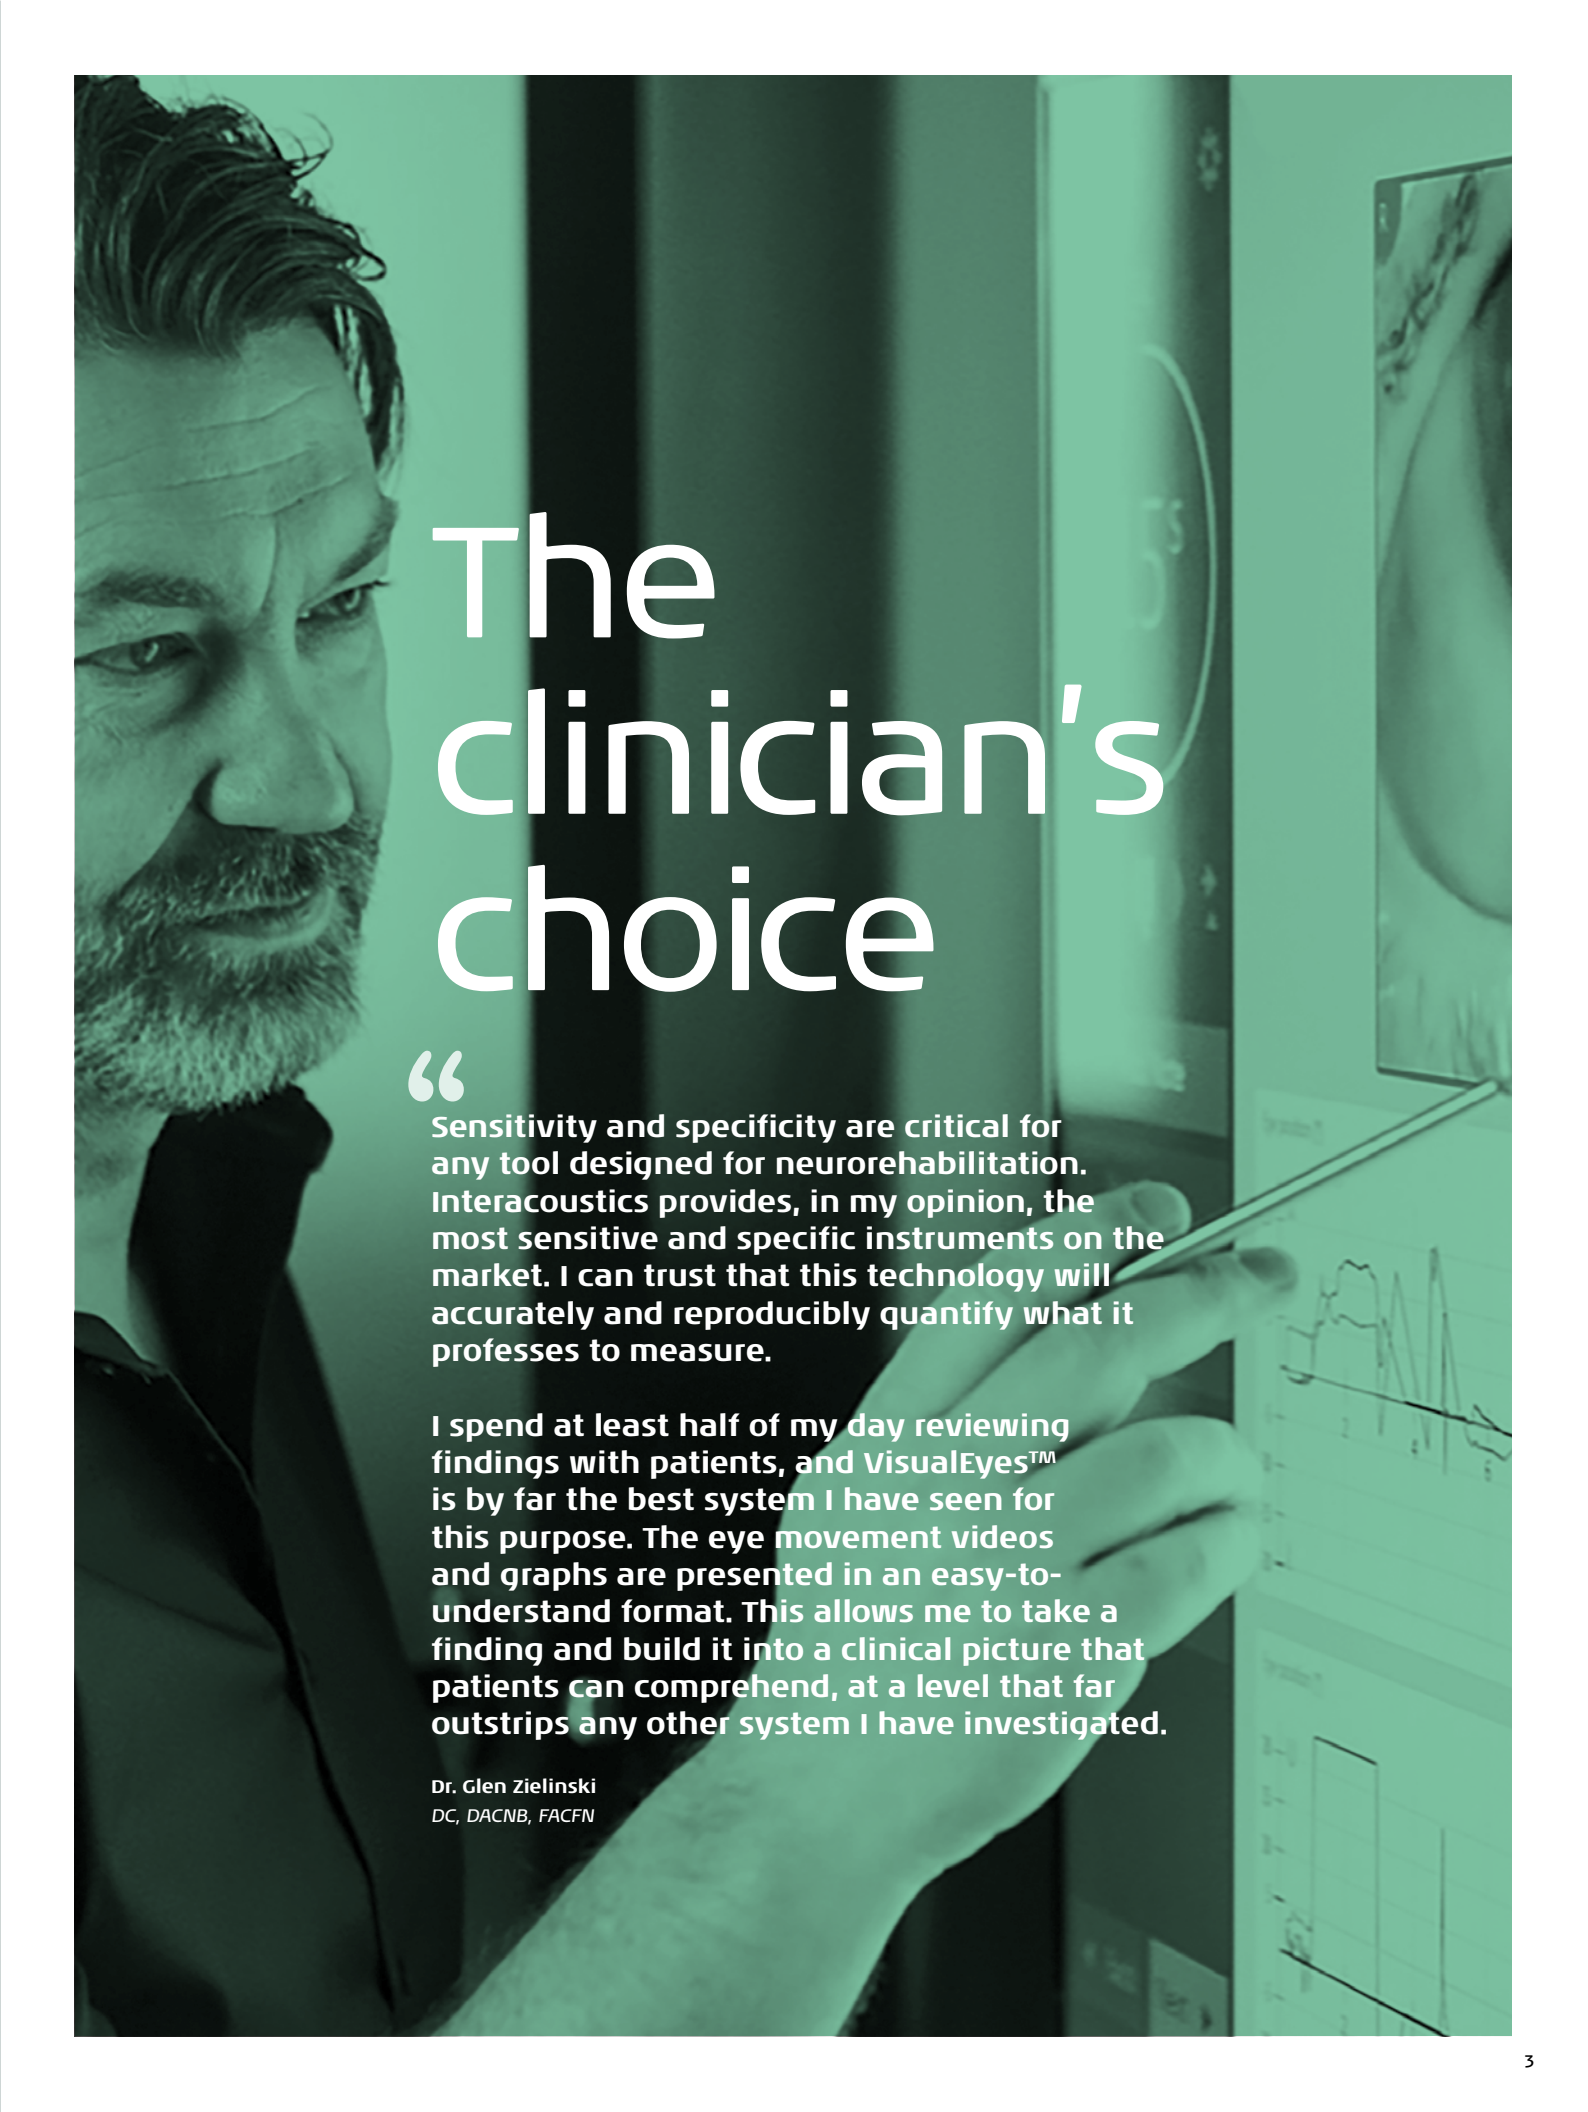

Our many years of experience have been consolidated into one single VisualEyes™ software platform. With a variety of software bundles and hardware options to choose between, you can purchase what you need now and follow simple upgrade paths as your business needs change.

## **Made by clinicians for clinicians**

VisualEyes™ allows you to combine the vestibular technologies that fit the needs of your practice. Move beyond traditional VNG testing with saccadometry, torsional eye tracking, self-paced saccades, cervical gaze, and smooth pursuit neck torsion.

## **Made to grow with your practice**

VisualEyes™ provides you with a solid foundation that you can build on for years to come. No matter your clinical practice, VisualEyes™ is a smart choice.

A man with a beard and dark hair is looking intently at a computer monitor. The monitor displays a graph with a line and a medical image of a person's head. The entire scene is overlaid with a semi-transparent green filter.

# The clinician's choice

“

Sensitivity and specificity are critical for any tool designed for neurorehabilitation. Interacoustics provides, in my opinion, the most sensitive and specific instruments on the market. I can trust that this technology will accurately and reproducibly quantify what it professes to measure.

I spend at least half of my day reviewing findings with patients, and VisualEyes™ is by far the best system I have seen for this purpose. The eye movement videos and graphs are presented in an easy-to-understand format. This allows me to take a finding and build it into a clinical picture that patients can comprehend, at a level that far outstrips any other system I have investigated.

Dr. Glen Zielinski  
DC, DACNB, FACFN

**For balance centers, vestibular audiologists and neurologists: VisualEyes™ 525**

VisualEyes™ is our full range VNG system, which allows you to quantify the functionality of the peripheral vestibular system and the central vestibular pathways. You can choose between various tracking algorithms to diagnose the hard cases that less advanced systems might miss. Protocols such as Saccadometry, Self-Paced Saccades, Cervical Gaze, and Smooth Pursuit Neck Torsion will help you to obtain an even more detailed understanding of your patient's central vestibular disorders and neurorehabilitation therapies can be derived from this data.

**For ENT offices and vestibular clinics: VisualEyes™ 515**

If you do not require an advanced oculomotor test battery, VisualEyes™ 515 is the way to go. It offers a user-friendly interface that is easy to learn. The ability to combine VisualEyes™ 515 with the Air Fx and Aqua Stim caloric irrigators, and with the Orion rotary chairs, provides you with additional means of assessing vestibular function, and can further your pediatric vestibular testing.

**For satellite offices, physical therapists and general medicine: VisualEyes™ 505**

VisualEyes™ 505 is a Video Frenzel system unlike most. You can access a substantial amount of clinical data with the Spontaneous Nystagmus test, which utilizes a nystagmus detection algorithm, offering you great support when diagnosing vestibular disorders. To further your functional assessments and BPPV tests, you have the option to add the Advanced Dix-Hallpike, Lateral Head Roll, Dynamic Visual Acuity, Gaze Stabilization and Functional Vision Head Impulse (fvHIT™) tests.

# Upgrade your vestibular package down the road as your needs change

## **EyeSeeCam vHIT**

Having EyeSeeCam vHIT included in VisualEyes™ allows you to generate a single report with both your vHIT and VNG results combined. You can also now perform monocular oculomotor testing using the EyeSeeCam vHIT goggle. This can save you time when you just need a quick look at how the eyes are moving and to check for gaze nystagmus or abnormal eye movements.

With EyeSeeCam vHIT, the ability to simultaneously evaluate eye and head movements can also aid in neurological assessments.

## **VORTEQ™ Diagnostic**

This package is a practical update to clinics that do not have a lot of extra space but want to add more functionality. It adds VORTEQ™ Active

Head Rotation (AHR), which allows you to assess gain, phase and symmetry of the VOR and faster head speeds. It also adds VORTEQ™ vHIT, where you use your existing VNG goggle to perform a binocular head impulse test, which can be interpreted along with the results from your VNG test. This package can be added on to VisualEyes™ 525.

## **VORTEQ™ Assessment**

This package can be added on to VisualEyes™ 505, 515 or 525, and includes the BPPV tests (Advanced Dix-Hallpike and Lateral Head Roll) and VOR Tests (Gaze Stabilization, Functional Vision Head Impulse Test (fvHIT™), and Dynamic Visual Acuity tests). It is ideal for balance clinics with limited space that require extra functionality. With the VORTEQ™ head sensor, you get more objective assessments compared to conventional bedside tests.

## **Research Module**

The Research Module is designed for researchers, scientists and universities. This tool can be added on to your VisualEyes™ 525 system to give you the flexibility and features you need to complete your research. The Research Module allows you to modify all nystagmus detection parameters and provides easy export of data to an Excel spreadsheet.

## **Electronystagmography (ENG)**

Clinics are often faced with patients that cannot wear or tolerate video goggles. This is common in small children and patients with nose injuries. For these instances, we offer an ENG option, which can be added on to your VNG system or Orion chair to allow for electrode-based oculo-graphy recordings.

Options  
are available  
for all clinical  
settings

**VORTEQ™ Diagnostics**

- Active Head Rotation (AHR) and VORTEQ™ vHIT with VNG goggles

**VORTEQ™ Assessments VOR Tests**

- Dynamic Visual Acuity (DVA), Gaze Stabilization Test (GST), and Functional Vision Head Impulse Test (fvHIT™)

EyeSeeCam vHIT module

**VORTEQ™ Assessments BPPV tests**

- Advanced Dix-Hallpike and Lateral Head Roll

Orion Reclining

Orion Comprehensive

# Orion Rotary Chair series

## Rotary chair testing made versatile

Rotary chair testing is an objective assessment of vestibular function. The VisualEyes™ platform integrates with the Orion chairs for advanced vestibular evaluations. Choose between Orion Auto Traverse, Orion Comprehensive and Orion Reclining.

- Orion Auto-Traverse: Rotary chair with off-axis centripetal acceleration.
- Orion Comprehensive: Rotary chair that is ideal for pediatric assessments.
- Orion Reclining: Designed for clinics with space-saving needs.

Expand your practice with Orion Rotary Chair options

Orion Auto-Traverse

## Interacoustics is more than state-of-the-art solutions

Our mission is clear. We want to lead the way in audiology and balance by translating complexity into clarity:

- Challenges made into clear solutions
- Knowledge made practical
- Invisible medical conditions made tangible and treatable

Our advanced technology and sophisticated solutions ease the lives of healthcare professionals.

We will continue to set the standard for an entire industry. Not for the sake of science. But for the sake of enabling professionals to provide excellent treatment for their millions of patients across the globe.
