# Elevate your patient's rehabilitation

MotionVR is designed to offer patients a motivating and engaging experience that simulates real-life activities, enhancing their rehabilitation journey. MotionVR's Computerized Dynamic Posturography (CDP) combines immersive VR with a dynamic, 360-degree force plate to assess the entire balance system and train adaptation, substitution, and habituation strategies.

What do  
you get?

VR goggles

Dynamic force

RR

In therapy, especially balance and vestibular rehab, we were always striving to simulate as close to a real environment as we could. Now we can with the MotionVR. Our patients are loving our new system and are getting challenged in a much advanced technology, which means greater and quicker recovery periods.

- Jerry Yarborough, DPT

What a  
MotionVR  
user says

# Comprehensive balance assessments for personalized training

The MotionVR provides a complete functional balance assessment package, featuring the CDP assessments: Sensory Organization Test (SOT), Adaptation Test (ADT), and Motor Control Test (MCT)\*. You can use the objective data from these assessments to develop personalized training programs for your patients.

\*MCT only available with MotionVR+.

# Safely push patients to their limits

You can customize training sessions with simulated real-life surfaces and instant force plate adjustments to optimize intensity progression. By using real-time objective feedback, you can challenge your patients and maximize the efficiency of each session in clinic.

- Full balance stimulation, including somatosensory, visual, and vestibular.

- You can use MotionVR to train the vestibulo-spinal reflex (VSR ) with reactive balance training.

- 360-degree moving force plate with adjustable angles and velocity.

- Allows for cognitive and motor dual-task exercises.

# Advanced yet space efficient

With the MotionVR, you get the best of both worlds. It combines advanced balance assessment and training options, including 360 degree movement, with a smaller footprint than comparable CDP systems, making it suitable for a diverse range of clinic sizes.

# Tailor your balance rehabilitation solutions to your patients' needs

BalanceVR

PhysioVR

## The power of rehabilitation with virtual reality

- Fully immersive, no visual reference in peripheral view.
- Simulated real-life training modules promoting adaptation, substitution and habituation.

Module examples:  
SVV, Target Tracking,  
Optokinetics, Supermarket

StaticVR

BalanceVR Smart

PhysioVR Smart

## ...Or with a StaticVR force plate

- Static posturography force plates for basic functional balance assessment.
- Force plates with objective data on balance control for tailored balance training.

Module examples:  
CTSIB, LOS, LOS Rehab,  
BirdVR

MotionVR (+) (OH)

BalanceVR Premium (+) (OH)

PhysioVR Premium (+) (OH)

## ...Combined with a MotionVR dynamic force plate

- CDP (Computerized Dynamic Posturography) for full functional balance assessment.
- Dynamic 360 degree force plate to simulate real-life surface and stimulate the full balance system.

Module examples:  
SOT, ADT, MCT, LOS,  
Motion Program, SkiVR

SOT: Sensory Organization Test, ADT: Adaptation Test, MCT: Motor Control Test, LOS: Limits of Stability, CTSIB: Clinical Test for Sensory Interaction on Balance, SVV: Subjective Visual Vertical.

# Science made smarter

## Interacoustics is more than state-of-the-art solutions

Our mission is clear. We want to lead the way in audiology and balance by translating complexity into clarity:

- Challenges made into clear solutions
- Knowledge made practical
- Invisible medical conditions made tangible and treatable

Our advanced technology and sophisticated solutions ease the lives of healthcare professionals.

We will continue to set the standard for an entire industry. Not for the sake of science. But for the sake of enabling professionals to provide excellent treatment for their millions of patients across the globe.
